Estcom Crisis

Introduction

For several years Eskom South Africa's state owned electricity utility has been surrounded by energy crises. The issues experienced by Eskom power station have forced the company to register regular power cuts that are unimely for business and households.

Financial Mismanagement

Eskom has been laden with debt due to corruption, poor management, and financial negligence making it incapable of effecting necessary upgrades.

Dependence on Coal

Essentialization on coal-fired power stations has exposed Eskom to international climate change policies that have induced high production costs and insignificantly enhanced sustainability.

Conclusion

As seen in this paper, the Eskom crisis is a complex problem that needs a tactical and integrated solution. With regards to the infrastructure issues, promulgation of renewable energy as well as compulsory changes on the governance structure, Eskom is in a good position to disapprove the issues and make sure that adequate energy supply is provided to South Africa.
