*Lesotho Hospital And
Filter Clinics: A Public-
Private Partnership*

Introduction

The case of the Lesotho Hospital and Filter Clinics demonstrates a kind of public-private partnership to solve problems related to health care systems in the developing countries. The concept aim of this innovative partnership is indeed to address gaps existent at present in relation to health care delivery and its ability to increase access, effectiveness and quality.

Key Challenges

Challenges encountered in the Lesotho healthcare sector include; poor infrastructure, a shortage of human resource in health care and lack of adequate finances. An equally high level of child mortality or infant mortality was another reason for reform demanding more attention. The government saw that these problems could not be solved by applying traditional public sector solutions alone to which it resorted to form this partnership.

Outcomes and Impacts

These changes even included improved patient health, improved facility and increased staff development as a result of the partnership. But, the project also mentioned some issues like high costs of the project, some peoples thought that it has financial problem, and private sectors seen as making money out of the project.

Conclusion

This case of the Lesotho Hospital and Filter Clinics is supportive evidence of the Laferla proposal that PPPs can respond to system-level health care problems. Yet it has significant implications that other nations interested in new methods of advancing healthcare systems should learn from.
