Pandemic and Organization

Introduction

The present study highlighted that COVID-19 pandemic affected organizations globally by posing some unprecedented challenges. The case "Pandemic and Organization" gives an insight of how organizations can plan and respond to disruptions, ensure business continuity and most importantly protect the employees as the business carries on.

Operational Effects

Companies already experienced abrupt strategic management challenges, such as supply chain escalation, lack of workforce, and changed customers' demand. The case thus underscores the need for early identification followed by quick development of contingency mechanisms.

Raising Importance

Employee welfare and well being become one of the main issues during the pandemic. The solution includes measures that are remote work policies, PPE provision, and assuring mental health support. Those organizations that have embraced the welfare of employees were stronger in maintaining the standard output power and motivation during the crises.

Conclusion

The "Pandemic and Organization" case allows showing that contingency and planning are the key to success amid the challenges. Hence, health, technology and resilience are key areas that can help organizations build a strong value and readiness model to address a changing business environment.
