*Progress in Adopting EHR
in Saudi Eastern Region
Private Hospitals*

Introduction

The implementation of electronic health records in private hospitals in the eastern Saudi Arabia has received some level of advancement. Overall the main role of EHR systems relates to enhancing efficiency in healthcare, patient treatment and aims, and operational utility.

Current Adoption

Several private hospitals in KSA's Eastern Region have lately begun to appreciate the need to adopt EHR systems. These systems help patients' information to be well managed, increase efficiency and facilitate the quick retrieval of patient records. The Saudi MoH has also supported EHR extensively and is coordinating with the Kingdom's Vision 2030 as well.

Workforce Resistance

Lack of proper training and awareness among the medical staffs becomes a main reason for resisting the adoption.

Conclusion

The migration to EHR in the Saudi Arabia's Eastern Region is more therefore a significant strides to improving the healthcare. This paper has revealed that private hospitals have to overcome financial, educational, and technical limitations to achieve the benefits inherent in EHR systems.
