The Puerto Rico Pill Trials

Introduction

Puerto Rico Pill Trials: A Turning Point in the Pharmaceutical Industry and the Unraveling of New Ethical Dilemmas and Compromises of Phase II Medical Research. This case highlights the experimental research done in the 1950s in what could be seen as the all our logging labs Guiana experimental protocol in this case exploring the spacing of births among Puerto Rican women through the testing of the pill.

Historical Context

The trials occurred in a time when the choice of contraceptives was small and the Catholic Church has much influence on the policies regarding contraceptives. The scientific objectives of the study involved the evaluation of the safety of taking oral contraceptives, and the ethics stuck only to the back of the head where they did not interfere with the experimental advancement.
