VINSUN INFRA ENGINEERING: ERP ON PREMISE OR ON CLOUD

INTRODUCTION

The key decision for Vinsun Infra Engineering involves determining between running their ERP system from their internal datacenter or through cloud-based hosting. Vinsun stands as a leading infrastructure company that dedicates resources toward operational enhancement alongside cost reduction with scalability as a primary goal.

KEY CHALLENGES

The organization finds it difficult to select an ERP solution which matches its strategic direction for future development.

Using on-premise ERP systems means Vinsun must buy expensive hardware and software along with funds for system upkeep. While cloud-based ERP systems give users flexible scalability they create security-related worries and potential operational cost burdens.

DATA CONTROL

Because Vinsun handles its data exclusively at its premises, the on-premise solution satisfies essential demands for organizations managing sensitive business information.

CONCLUSION

Vinsun demonstrates the requirement to conduct balanced analysis between operational cost management and scaling capacity and system protection requirements. Cloud-based ERP solutions bring agility alongside scalability yet on-premises ERP maintains capable data control together with customized solutions.

RECOMMENDATION

This case is just a sample partail case solution. Please place the order on the website to order your own orignally done case solution.
