

Business Process Modelling Notation Assignment

Introduction

Business Process Modelling Notation (BPMN) is a flowchart type language for documenting business processes in a process life cycle. It assists an organization to map its structure by creating a clear and easy to understand model of the functioning of its internal structures.

Bpmn assignment

As with the previous examples, in the Business Process Modelling Notation assignment case solution students are presented with a business situation to which they must apply BPMN. It is to model the process that would give a correct picture of the organizational structure or a project, to determine the steps, the decisions, and the sequences of activities.

Optimizing the Process

Following the production of the first diagram, students have to assess this process and indicate changes that could be made. It may refer to optimizing a process by excluding unnecessary actions, implementing some operations through the use of information technology, or redesigning decision making routes.

Conclusion

BPMN Assignment case solution from TheCaseSolutions.com contains all practical understanding of how to use BPMN in real life planning. Students gain critical thinking abilities in solving business processes in this assignment as it involves the best approach in enhancing the processes.

Recommendation

This is just a sample partial case solution. Please place the order on the website to order your own originally done case solution.
