

*Developing the NGO
Infrastructure in
China*

Introduction

In the “Developing the NGO Infrastructure in China” case, the virtues and vices of starting and growing the non-governmental organizations (NGOs) in China are discussed. It also looks at the ways in which the operating regulatory environment and the general socio-political climate affect these organizations in China.

NGOs in China

The major challenges affecting NGOs in China include; Principal among them is the government interference. The government monitors and regulates activities of NGOs to limit their operations with laid down regulations regarding the kinds of activities they can perform.

Key Opportunities

However, there is not all gloomy news for NGOs as there are areas where they stand a good chance of developing and growing in China.

Pointless NGOs have a great scope as in poverty alleviation, educational needs, health and environment issues such as conservation.

Conclusion

In conclusion, it may be possible to state that incorporating the NGO infrastructure in China does pose some difficulties, yet, at the same time, NGOs can be considered to have great potential and success sources, provided that build effective local partnerships, and follow governmental priority and strategic development initiatives.
