BUSINESS AND DIGITAL AUDIT REPORT

INTRODUCTION

In the modern world, it can be mentioned that the idea of the business and the digital audit is rather crucial. From TheCaseSolutions, the <u>Business and Digital Audit Report</u> case solution. en/ offers valuable lessons for how organisations can assess and improve their digital performance.

TECHNOLOGY INFRASTRUCTURE EVALUATION

It is a more technical component and focuses on the technology infrastructure and architecture that exists. It or the information technology audit is to determine whether current organisational solutions meet business requirements optimally in terms of software, hardware and networks.

CYBERSECURITY AND COMPLIANCE

Due to the increasing cases of cyber incidences, the audit assesses the company's cybersecurity and its way of operating regarding the set regulations. These are for example, policies on data protection, incident response, and general IT security.

CONCLUSION

The Business and Digital Audit Report case solution gives businesses a systematic way of examining their digital and operational activity. Political awareness maps out the necessary action plans in digital strategic planning, technology enablers, cyber-security and data management that firms can use to form successful insights on their necessary improvements in their digital outlook.
