DANSHUI PLANT NO. 2

INTRODUCTION

This paper is about Danshui Plant No. 2 examining the major manufacturing facility in Taiwan scenario based on operation issues and strategic management. It therefore has practical lessons in the management of industries, in determining production processes and in how to make critical decisions in high risk circumstances.

KEY CHALLENGES

Some of the problems that the critical unit in the company's supply chain, namely Danshui Plant No. 2 faced are as follows :-

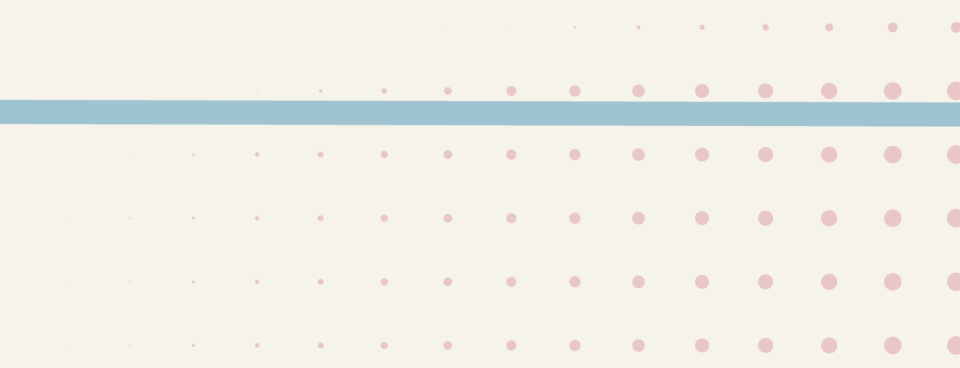

These main issues were revealed: Most of the equipment used was old, the production lines were not effectively designed and the management of the production floors could not be said to be adequate. Such problems caused high operational costs, low productivity and poor quality standards in organizations.

MANAGEMENT PRACTICES

in 'Training and Development,' it is proposed that steps are taken to improve the quality of management in organisations since these initiate better decisions and improved performances by employees. It is crucial to identify and prioritise such aspects as leadership and team work if one is to have a yieldingly profitable performance at work.

CONCLUSION

From Danshui Plant No. 2 case solution, one gets a better understanding of how to approach operational problems as a strategist in a manufacturing context. Using an emphasis on the technology advancement, clarification of working processes, managerial changes, and the finance forecast, the plant may eliminate the existing problems and develop continually.
